Fine Chemicals China News

China has become the world production base of fine chemicals. Its annual production value of fine chemicals occupies over 17% of the global with the growth rate of 5%. Fine chemicals industry occupies 35% of chemical industry in China, and it has become a new growing point of China's economy. Chinese government has listed fine chemicals as one of the six preferential industries in *the eleventh five year plan* and has provided it with preferential fund and supporting policies.

The supply of fine chemicals in the world is more and more depending on China. China occupies 60% the global dye output, one third of citric acid consumption, and 50% of the vitamin C. China will play an important role in the raw material supply of pharmaceuticals, when Europe is shifting their attention from this field to developing active pharmaceutical ingredients (API) and dangerous chemicals in the future.

The weak research ability and intellectual property protection have restricted the fast development of fine chemicals in China and only 10% of the research findings are industrialized. Better understanding of China's fine chemical market will facilitate your entering China's market, with your innovative technology and products.
